Allowable Subject Matter

1. **Claims 37-42 renumbered as 1-6** are allowed.

The following is an examiner's statement of reasons for allowance:

2. **Claims 37-42 renumbered as 1-6** are allowable over the prior art of record because the Examiner found neither prior art cited in its entirety, nor based on the prior art, found any motivation to combine any of the said prior art references which teaches at least first *pre-allocating* a first amount of bandwidth in accordance with a static modality and then in response to a request for bandwidth from *each* of the requesting plurality of receiving stations, assigning to everyone one of the requesting second plurality of receiving stations the requested bandwidth *up to a predetermined guaranteed minimum bandwidth* and *sharing a remaining bandwidth* not assigned in response to a request for bandwidth among the requesting second plurality of receiving stations. In particular, for the most part the examiner found references that taught either statically assigning the bandwidth or dynamically assigning the bandwidth for point-to-multi-point systems (i.e., few references taught both allocation schemes for a point-to-multi-point communications system). One such example that teaches both modalities is the TAJIMA cited reference which in section 3.2 teaches a static modality for re-allocation of fixed time slots and a dynamic modality for shared bandwidth. However, the TAJIMA reference does not further teach at least the limitations of a assigning a *predetermined guaranteed minimum bandwidth* for each requesting station and further *sharing the remaining bandwidth*. In particular, TAJIMA appears to be silent in teaching sharing the remaining bandwidth not assigned in accordance with a static modality and not in response to a request for bandwidth among requesting second plurality of receiving stations.
